## Your garden always well mowed

Small, compact, noiseless, AutoLawnMow is the gardener with an electronic heart and with surprising abilities. Ideal both for small and big gardens, it is the perfect instrument for those who want to have a magnificent lawn, mowed and clean like a green.

## How it works

It mows by itself with a random system. The cutting system is optimized with spirals or stars (model of the Line 100). The lawn will be always well mowed and thanks to the mulching effect the garden will get a further life.

## How it recharges

AutoLawnMow will recharge by itself\* only when the batteries are flat by following the border wire till its entering the docking station. It will resume working autonomously after about 3-6 hours\* of recharge without any need for human intervention.
